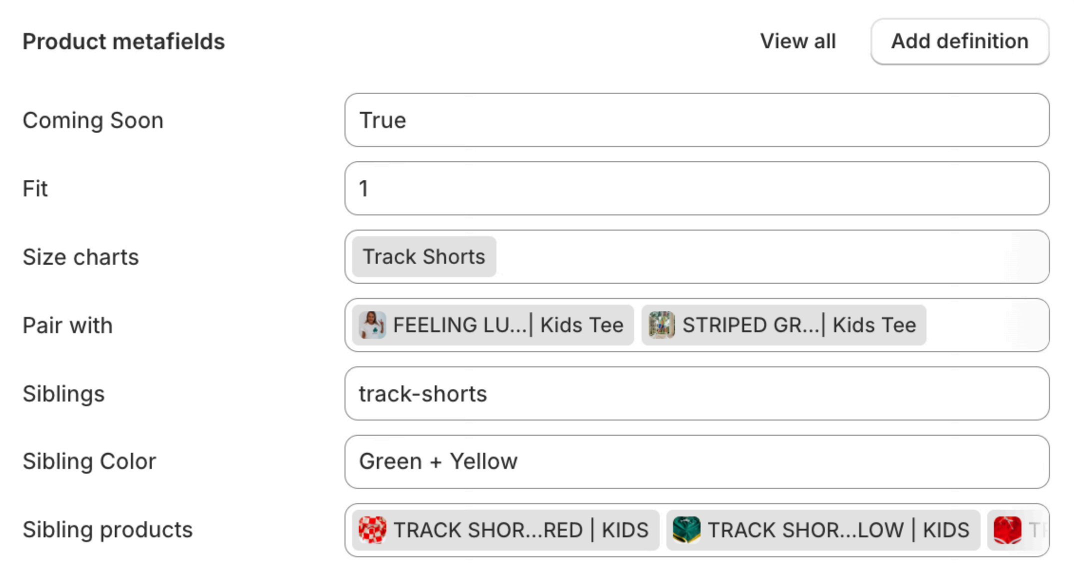
INTERNAL GUIDE

Product Metafields

These fields show up on **every product** (Admin → Product → *Metafields* section). They control special theme behaviors on a **per-product basis**, with no code changes.



Product metafields

Coming Soon: True
Fit: 1
Size charts: Track Shorts
Pair with: FEELING LU...| Kids Tee, STRIPED GR...| Kids Tee
Siblings: track-shorts
Sibling Color: Green + Yellow
Sibling products: TRACK SHOR...RED | KIDS, TRACK SHOR...LOW | KIDS

Real example — the **Track Shorts** product with every field filled in

---

Individual fields

Each one acts on its own, on the product where it's filled in.

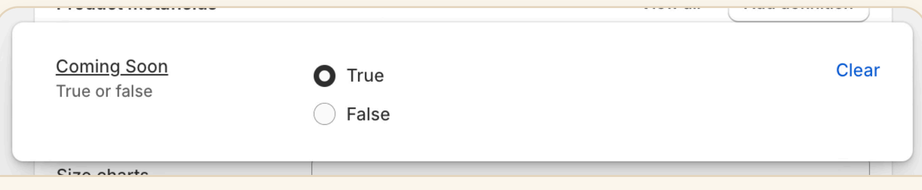
Coming Soon

01

PRE-LAUNCH

Flags the product as **pre-launch**. When on, the theme **hides the price** and shows the “Notify Me” flow instead of the buy button.

Type	True / False
How to set	Choose **True** while it's not for sale. Set **False** (or Clear) at launch.



Coming Soon
True or false

● True
○ False

How it looks in the product admin

Fit

02

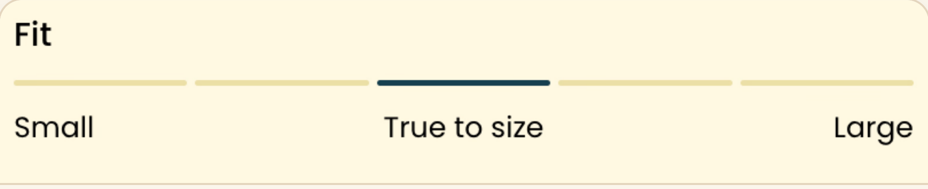
SIZING SCALE

Shows a **fit guide** on the product page — where the item sits on the Small → Large scale.

Type	Number (1–5)
How to set	Enter a number from **1 to 5**. It highlights that point on the scale. **If empty, it defaults to True to size (3).**

WHAT EACH NUMBER MEANS

1. **Runs small** — size up
2. **Slightly small**
3. **True to size** — most common
4. **Slightly large**
5. **Runs large** — size down



How it looks on the product page (here: 3 = True to size)

Size charts

03

MEASUREMENTS POPUP

Links the product to the **size chart** that opens in the sizing popup.

Type	Reference (chart)
How to set	Pick a ready-made entry — **Content → Metaobjects → Size Chart** (e.g. “Kids Tees”, “Track Shorts”). Empty = popup won't appear.
New chart?	If the right one isn't listed, create it first: Size Chart → **Add entry**, then select it here.

FEELING LUCKY| Kids Tee
$30.50

STRIPED GREEN + YELLOW | Kids Tee
$22.87 ~~$30.50~~

How it looks on the product page

The “Siblings” group — they work together

Link the **same style across different colors/prints**, showing the swatch dots on the card and the product page.

> **Why it matters** Each color/print is a **separate product** in Shopify. Without this link, those pages are unrelated dead-ends and customers never discover the other versions. With it, they can **hop between every version** from any one product page — and when you launch a new color, just add it to the collection and it shows up on all the siblings automatically.

Siblings

05

BY COLLECTION

Links the variations **by collection**: you enter the *handle* of a collection that gathers all versions of that style.

Type	Text (handle)
Example	`track-shorts`

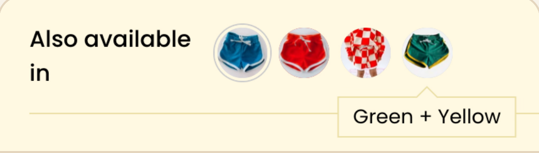
Sibling Color

06

SWATCH TOOLTIP · OPTIONAL

The **name of this product's version**. It appears as the **tooltip** when you hover a swatch in “Also available in”. Each sibling has its own.

Type	Text
Example	Green + Yellow
Optional	Swatches still appear and link without it — you only lose the hover label.



The “Green + Yellow” label is the swatch tooltip

Sibling products

07

BY MANUAL LIST

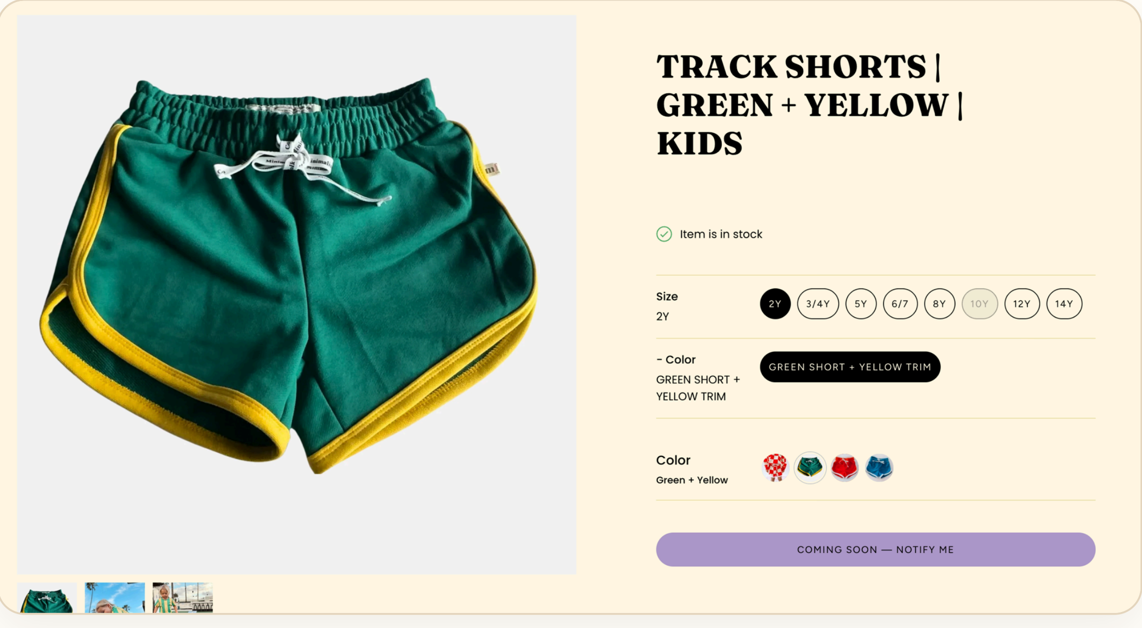
Alternative to a collection: you **manually list** the other versions of the same style.

Type	List of products
How to set	Select the other color/print versions.

Use **Siblings** (collection) *OR* **Sibling products** (list) to make the link — you only need one. Either way, fill in **Sibling Color** on each product so the swatch shows the right label.

How it looks in the store

The same fields, filled in and live on the product page.



TRACK SHORTS | GREEN + YELLOW | KIDS

A **Color/print swatches (Siblings)**
The 4 versions of the same style, linked by the **Sibling products** + **Sibling Color** fields.

B **“Coming Soon — Notify Me” button**
Appears automatically when the **Coming Soon** field is set to **True** — it replaces the buy button.

How to set it up

1. Admin → **Products** → open the product.
2. Scroll to **Metafields** (the section in the screenshot).
3. Click the field and **type or select** the value.
4. **Save** (top-right corner).

In bulk
To fill in many products at once (e.g. the color for a whole collection): Products → select several → **Edit products** → add the metafield columns in the bulk editor.
